Abstracts

Standard Steam Coil is a heat exchanger used to heat air or other gases. It heats air through the heat of steam and is widely used in various HVAC systems. Standard steam coils are usually made of copper or copper-nickel tubes with two headers, one for steam supply and the other for condensate return. The steam enters the coil through the inlet header, releases heat during condensation, and leaves as a liquid through the outlet header. This coil is simple in design, suitable for air temperatures above freezing, and is commonly used for air heating in warm climates.

The global Standard Steam Coil market size was estimated at USD 2509.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
