Abstracts

Standing Seam System is a high-performance metal panel mounting system where panels are connected to each other by vertical bite edges without exposed fasteners, providing excellent waterproofness and a modern appearance. The system is usually made of durable metal materials such as aluminum, galvanized steel, stainless steel or copper, supplemented with anti-corrosion coating to increase service life. The bite design between panels not only ensures the stability of the structure, but also allows the metal to expand and contract freely due to temperature changes, thus avoiding deformation problems caused by thermal expansion and contraction.

The global Standing Seam System market size was estimated at USD 562.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
