Abstracts

Stannous methanesulfonate is an organotin compound specifically employed as a key electrolyte component in the electroplating industry, where it serves as a soluble source of tin(II) ions for the deposition of tin and tin-alloy coatings on various substrates?most notably in electronics manufacturing for printed circuit boards, connectors, and semiconductor packaging, as well as in food packaging and automotive applications. Its methanesulfonate-based formulation is favored over traditional tin salts (such as stannous sulfate or chloride) due to its higher solubility, improved bath stability, reduced corrosivity, better throwing power, and compliance with environmental regulations limiting halogen use, making it a specialized chemical integral to advanced tin electroplating processes that demand high purity, uniformity, and performance characteristics.

The global Stannous Methanesulfonate market size was estimated at USD 42.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
