Abstracts

Starch-based bioplastics are a category of biopolymers derived primarily from renewable agricultural resources such as corn, potatoes, cassava, and wheat, which are processed to extract starch that serves as the foundational polymer matrix. These materials are designed to be biodegradable or compostable under specific conditions, offering an alternative to conventional petroleum-based plastics in applications ranging from packaging, disposable cutlery, and agricultural films to medical and pharmaceutical uses. The appeal of starch-based bioplastics lies in their reduced carbon footprint, potential for circular economy integration, and compliance with growing regulatory and consumer demands for sustainable materials, though their performance characteristics?such as mechanical strength, water resistance, and durability?often require modification through blending with other biopolymers or additives to meet practical application requirements.

The global Starch Based Bioplastics market size was estimated at USD 1050.35 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.30% during the forecast period.
