Abstracts

Starch-based fat replacers are functional food ingredients derived from various starch sources, such as corn, potato, tapioca, or rice, which are physically or enzymatically modified to mimic the sensory and textural properties of fats while providing fewer calories. These hydrocolloids function by forming gels that mimic fat's mouthfeel, moisture retention, and creaminess in reduced-fat or fat-free food products, making them particularly valuable in applications like dairy products, baked goods, sauces, dressings, and processed meats. Their appeal lies in addressing consumer demand for healthier, lower-calorie alternatives without sacrificing taste or texture, aligning with broader trends toward clean-label and plant-based ingredients in the food industry.

The global Starch Based Fat Replacer market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.15% during the forecast period.
