Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Starch Based Films competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Starch-based films are biodegradable and eco-friendly materials made primarily from natural starch, often derived from sources like corn, potatoes, or cassava. These films serve as sustainable alternatives to petroleum-based plastics, offering similar properties such as flexibility, transparency, and strength. Starch-based films are widely used in packaging, agriculture, and food industries, where they are valued for their compostability and reduced environmental impact. However, they can be sensitive to moisture and have lower durability compared to synthetic plastics, driving ongoing research to enhance their performance and expand their applications. As demand for sustainable materials grows, starch-based films are gaining popularity in the movement toward greener packaging solutions. The Starch-Based Films market focuses on the production of biodegradable and eco-friendly films derived from starch, which are used as alternatives to conventional plastic films. These films are widely applied in packaging, agriculture, and food industries due to their biodegradable nature and reduced environmental impact. With increasing concerns over plastic waste and stringent regulations promoting sustainable materials, the market is witnessing strong growth. Technological advancements in improving the mechanical properties and durability of starch-based films are also boosting their adoption. Key drivers include the rising demand for sustainable packaging solutions and growing consumer preference for environmentally friendly products.

The global Starch Based Films market size was estimated at USD 205.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the
