The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Starch-based Micropellet Cores competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Starch-based Micropellet Core is a drug carrier made primarily from starch, widely used in the formulation of oral medications, particularly in sustained-release or controlled-release preparations. Starch offers excellent biodegradability and good moldability, making it an ideal material for micropellet cores. By encapsulating the active pharmaceutical ingredient (API) in the starch micropellet, the drug can be released gradually, ensuring prolonged therapeutic effects and reducing side effects. Furthermore, as a natural polymer, starch has good biocompatibility, allowing safe drug release in the gastrointestinal tract, generally without causing adverse reactions. In 2024, the global production of starch-based micropellet cores is 11,005 tons, with an average price of 7,360 USD per ton.

The global Starch-based Micropellet Cores market size was estimated at USD 81.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
