Abstracts

Starch-based plastic film is a type of bioplastic derived primarily from renewable resources such as corn, potatoes, cassava, or wheat, where starch acts as the fundamental polymer component, often blended with biodegradable polyesters or other additives to enhance mechanical properties, flexibility, and water resistance. Unlike conventional petroleum-based plastics, this material is designed to be biodegradable or compostable under specific conditions, breaking down into water, carbon dioxide, and biomass, thereby reducing environmental persistence and plastic pollution. Its applications span various industries, including food packaging, agricultural mulch films, and disposable bags, driven by increasing regulatory pressure, consumer demand for sustainable alternatives, and corporate sustainability goals aimed at minimizing the ecological footprint of plastic products.

The global Starch Based Plastic Film market size was estimated at USD 385.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
