Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Staring Hyperspectral Imaging Camera competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Staring Hyperspectral Imaging Camera is an imaging device based on liquid crystal tunable filter (LCTF), which can capture images in multiple spectral bands at the same time. Unlike ordinary cameras that can only capture visible light, hyperspectral cameras can capture spectral information from visible light to near infrared and even short-wave infrared.Staring Hyperspectral Imaging Camera uses liquid crystal tunable filter (LCTF) to continuously subdivide narrow bands and perform high-resolution two-dimensional array imaging of each band. Specifically, LCTF can select specific wavelengths by electronic control, thereby achieving accurate imaging of different bands. Through image processing, a complete hyperspectral image sequence is finally obtained.

The global Staring Hyperspectral Imaging Camera market size was estimated at USD 9251.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.10% during the forecast period.
