Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Start-Stop Power Supply competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The start-stop power supply is a power solution designed specifically to meet the start-stop system of the car. Its core function is to provide stable and reliable power support for the vehicle during the start-stop process, ensuring that other electronic devices can work normally when the engine starts and stops frequently. With the increasingly stringent environmental regulations and the development of electrification in the automotive industry, the start-stop power supply has gradually become an indispensable and important part of modern cars. As an intelligent power supply product with remote control function, the start-stop power supply is rapidly popularizing with the development of industries such as industrial automation, intelligent manufacturing, new energy systems, communication equipment and rail transportation. It has the characteristics of remote start-stop, programmable control, digital bus communication (such as PMBus, CAN, Modbus, etc.), which can significantly improve the system integration efficiency and operation and maintenance convenience, and become the key support unit for the "software and hardware integration" of intelligent devices. The current market shows two significant trends: first, the demand for small and medium power segments continues to grow, especially in industrial control, communication power supply, and security systems. The second is that the mid-to-high-end market has a strong demand for intelligent and remotely monitored power modules, which drives the development of programmable, bus communication, and multi-channel output power supplies.

The global Start-Stop Power Supply market size was estimated at USD 4482.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
