Report Overview

The electrostatic access control system is an access control system based on the principle of electrostatic induction. By sensing static electricity on the human body, the system automatically identifies personnel and controls the access switch, thereby achieving area entry and exit management. The electrostatic access control system consists of sensors, controllers, power supplies, locks, etc. The sensor is responsible for sensing static electricity on the human body and transmitting the signal to the controller. The controller performs identity recognition and access control according to preset rules. The power supply provides the power required by the system, and the lock controls the opening and closing of the door.
