The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Static Dimension Weight Scanning (DWS) System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Static Dimension Weight Scanning (DWS) System is a logistics automation equipment that integrates high-precision laser/vision measurement, weighing sensors and optical character recognition (OCR) or barcode scanning technology. It can simultaneously complete length, width and height measurement, weight collection and label information recognition when the package is stationary, and automatically calculate the volume, volume weight and freight-related parameters through the built-in algorithm, realizing the digitalization and standardized management of package information, effectively improving the utilization rate of storage space, optimizing transportation cost calculation, and reducing manual operation errors. It is widely used in express sorting centers, e-commerce warehouses, cross-border logistics and other scenarios. The global future development trend of static dimension weight scanning (DWS) system is analyzed by region as follows: The North American market is driven by a strong e-commerce industry, high logistics activities, and the need to comply with dimensional weight pricing policies, and the demand for static dimension weight scanning (DWS) systems will continue to grow. The US market is expected to maintain a high growth rate in the next few years, thanks to its mature e-commerce market and highly automated logistics system. The European market is affected by strict regulations on accurate weight and dimension calculations and the increasing popularity of logistics and warehousing automation, and the demand for static DWS systems has grown steadily. Major countries such as Germany, the United Kingdom, and France are at the forefront of logistics automation and have a wide application of static DWS systems. In

the future, as Europe's requirements for environmental protection and energy efficiency increase, the role of static DWS systems in optimizing warehouse space utilization and reducing transportation costs will become more prominent, driving the market to continue to grow. The rapid growth of e-commerce and manufacturing in the Asia-Pacific region has created a huge demand for static DWS systems to optimize transportation and warehousing operations. As the largest economy in the Asia-Pacific region, China's static DWS system market has experienced significant growth in the past few years and is expected to continue to grow rapidly in the next few years. Japan, South Korea, India and Southeast Asia are also important markets that cannot be ignored. With the continuous development of e-commerce and manufacturing in these regions, the demand for static DWS systems will gradually increase. Although the market size in the Middle East, Africa and Latin America is relatively small at present, with the growth of economy and the development of logistics industry, the demand for static DWS systems will gradually increase.

The global Static Dimension Weight Scanning (DWS) System market size was estimated at USD 205.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
