Abstracts

Static dissipative plates are specialized materials designed to control and safely dissipate static electricity, typically used in environments where electrostatic discharge (ESD) poses risks to sensitive electronic components, flammable materials, or manufacturing processes. These plates are engineered to have a specific surface resistance?often in the range of 10^6 to 10^9 ohms?allowing them to gradually neutralize static charges without generating sparks or sudden discharges. They are commonly made from composite materials, such as carbon-loaded polymers, conductive laminates, or treated surfaces, and are utilized across industries like electronics manufacturing, aerospace, pharmaceuticals, and cleanrooms where protection against ESD is critical for product integrity, safety, and operational reliability.

The global Static Dissipative Plates market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
