Abstracts

Static free packaging films, also known as anti-static or electrostatic discharge (ESD) packaging films, are specialized polymer-based materials engineered to protect sensitive electronic components, devices, and assemblies from damage caused by electrostatic discharge during handling, storage, and transportation. These films are formulated with additives or coatings that either dissipate static electricity or provide a conductive or static-shielding barrier, effectively preventing the buildup and sudden release of electrostatic charges that could otherwise impair or destroy microchips, circuit boards, and other electronics. Available in various forms such as bags, wraps, and liners, they are essential in industries like semiconductor manufacturing, aerospace, medical devices, and consumer electronics, where even minimal electrostatic interference can lead to significant product failure or reduced performance.

The global Static Free Packaging Films market size was estimated at USD 1745.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
