Abstracts

Static grounding systems are specialized safety and protection devices designed to prevent electrostatic discharge (ESD) in environments where static electricity poses risks such as equipment damage, data loss, fire, or explosion. These systems typically include components like grounding cords, wrist straps, footwear, mats, and monitoring equipment, ensuring a continuous path for static electricity to safely dissipate into the earth. They are critical in industries such as electronics manufacturing, pharmaceuticals, chemicals, aerospace, and oil and gas, where sensitive components, flammable materials, or precise processes require stringent control of static electricity to maintain operational safety, product integrity, and regulatory compliance.

The global Static Grounding Systems market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
