Abstracts

Static mesh nebulizers are medical devices used for aerosol therapy, delivering liquid medication as a fine mist via a vibrating mesh or perforated plate mechanism, which is activated by piezoelectric elements to generate precisely sized droplets optimal for deep lung deposition; this technology represents an advancement over traditional jet and ultrasonic nebulizers, offering quieter operation, greater portability, higher efficiency in drug delivery, reduced residual volume, and enhanced compatibility with a broader range of medications, including suspensions and biologics, making them particularly suitable for patients requiring consistent and reliable respiratory treatments such as those with asthma, COPD, cystic fibrosis, or other chronic pulmonary conditions.
