Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Static Model Aircraft competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Static model aircraft are non-flyable models that are scaled down to a fixed scale (such as 1:72, 1:144, 1:400, etc.) based on real aircraft. They are mainly used for collection, viewing or educational display, and do not have the ability to fly or dynamically control. Through fine molds and processes, the appearance details of real aircraft (such as fuselage lines, paint, landing gear, engine compartment, etc.) are reproduced. Some high-end models can even open the door to show the internal structure. Common materials include plastic (ABS, resin), metal (zinc alloy, aluminum alloy), wood or composite materials. Among them, metal models are often used in the field of high-end collections because of their good texture and durability.

The global Static Model Aircraft market size was estimated at USD 370.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Static Model Aircraft market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
