Abstracts

A static neutralizing blower is an industrial device designed to eliminate or substantially reduce electrostatic charges from surfaces, materials, or environments by generating a stream of ionized air. It functions by producing both positive and negative ions, which neutralize static electricity on non-conductive or isolated objects, preventing issues such as dust attraction, product misalignment, electronic damage, or ignition risks in sensitive settings. These systems are commonly employed in manufacturing, packaging, printing, electronics assembly, and cleanrooms where electrostatic discharge (ESD) can compromise product quality, safety, or operational efficiency. Key components often include high-voltage power supplies, emitter points, airflow systems, and monitoring features to ensure consistent ionization performance.

The global Static Neutralizing Blower market size was estimated at USD 250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
