Abstracts

Static Random-access Memory (SRAM) IC is a type of semiconductor memory that provides high-speed access to stored data. Unlike dynamic random-access memory (DRAM), SRAM does not require constant refreshing and retains its data as long as power is supplied. SRAM ICs are typically composed of flip-flops arranged in a matrix, with each flip-flop storing one bit of data. This arrangement allows for random access to any memory location, making SRAM ideal for cache memory and high-performance applications. SRAMs offer fast read and write times, low power consumption, and are commonly used in microprocessors, networking equipment, and embedded systems.

The global Static Random Access Memory Sram Ic market size was estimated at USD 391.14 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
