Abstracts

Static sieve screeners and separators are a type of fixed screening equipment that classifies or separates materials by physical methods. Their main features are simple structure, stable operation, easy maintenance, and wide applicability. Compared with dynamic screening equipment, static screeners and separators have less vibration during operation, less interference with the surrounding environment, and can work continuously for a long time without frequent maintenance. They are particularly suitable for application scenarios with strict requirements on noise and vibration in the working environment. Their advantage is that they can provide more stable and reliable material handling performance while ensuring screening efficiency, while reducing the operating cost and maintenance frequency of the equipment, and improving overall operating efficiency and production safety.

The global Static Sieve Screeners and Separators market size was estimated at USD 443.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
