Abstracts

A Static Synchronous Compensator (STATCOM) solution is a highly advanced and efficient device in the realm of power systems. It serves as a flexible alternating-current transmission system (FACTS) technology. The STATCOM is designed to regulate voltage and improve power quality in electrical grids. It operates by injecting or absorbing reactive power into the system. When the grid experiences voltage dips, the STATCOM injects reactive power, thereby boosting the voltage back to an acceptable level. Conversely, during over-voltage situations, it absorbs reactive power to mitigate the excessive voltage. This dynamic adjustment of reactive power compensates for the varying reactive power demands of loads, such as industrial motors and other equipment that consume or generate reactive power unpredictably. By maintaining stable voltage levels, STATCOM solutions enhance the reliability and stability of the power grid, reduce power losses, and enable better utilization of existing transmission infrastructure. They are particularly crucial in modern power systems that are increasingly complex, with a growing presence of distributed generation sources and non-linear loads. The global Static Synchronous Compensator (STATCOM) solution market is experiencing stable growth, driven by factors such as the integration of renewable energy and the construction of smart grids. The STATCOM market in North America is expected to grow significantly due to the increasing adoption of renewable energy sources and the need for grid stabilization. The region is actively promoting the transformation of the energy structure, and the large-scale access of renewable energy has put forward higher requirements for grid stability, providing a broad market space for STATCOM. The Asia-Pacific region is also an important growth area for the STATCOM market. Driven by the rising demand for electricity and the expansion of transmission infrastructure, especially in countries such as China, India, and Southeast Asian countries, large-scale power grid construction and upgrading projects are

constantly advancing, which has increased the demand for STATCOM. Driving factors: Renewable energy integration: With the continuous expansion of the scale of renewable energy grid - connection, such as wind power and photovoltaic power, the instability of renewable energy power generation has brought challenges to the grid. STATCOM can quickly adjust reactive power to maintain grid voltage stability and improve the reliability of renewable energy grid - connection, so it is widely used. Smart grid construction: The construction of smart grids requires the improvement of the intelligence and flexibility of the power system. STATCOM, with its advantages of fast response and precise control, can better meet the requirements of smart grid operation, such as realizing the coordinated control with other power electronic devices and improving the overall operation efficiency of the grid. Technological progress: The continuous progress of power electronics technology has improved the performance and reliability of STATCOM, while reducing costs. For example, the application of new semiconductor materials and modular multi - level converter technology has made STATCOM more suitable for different voltage levels and application scenarios, promoting its wider market promotion.

The global Static Synchronous Compensator (STATCOM) Solution market size was estimated at USD 925.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
