Report Overview

Stand-on pallet truck is a kind of handling equipment used in industrial production and logistics transportation. It usually consists of a frame, an electric drive system, a pallet fork and a control system. Unlike traditional manual pallet trucks, stand-on pallet trucks allow the operator to stand on the frame for manipulation, which improves handling efficiency and operator comfort. Ride-on pallet trucks typically use an electric drive system that can move forward, reverse, turn, lift, and lower through components such as batteries, motors, and controllers. Pallet forks are usually designed to be adjustable to accommodate goods of different sizes and weights, and can also be easily loaded and unloaded through functions such as side shifting and rotation. Stand-up pallet trucks are widely used in factories, warehouses, logistics centers and other occasions, mainly for handling and stacking goods, which improves the efficiency of logistics transportation and work safety. At the same time, the stand-up pallet truck can also be customized according to the needs of users, such as adding safety guardrails, anti-collision devices, closed cabs, etc., to meet different working environments and work requirements.
