Abstracts

A steam blasting machine is a specialized industrial cleaning device that uses high-pressure, high-temperature steam to remove contaminants, grease, rust, paint, and other stubborn residues from various surfaces, machinery, and equipment. It operates by heating water to produce steam, which is then pressurized and expelled through a nozzle, combining thermal and mechanical energy for efficient cleaning without the need for harsh chemicals, making it environmentally friendly and suitable for industries where residue-free, sanitized surfaces are critical. These machines are commonly used in manufacturing, automotive, food processing, pharmaceuticals, and aerospace sectors due to their ability to deep-clean complex parts and adhere to strict hygiene and safety standards.

The global Steam Blasting Machine market size was estimated at USD 315.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
