Report Overview

Steam jet pulverizer is a systematic further development of the air jet pulverizer with integrated air classifier established in the market. If steam is used instead of air as the grinding medium, the available jet energy is significantly higher. The machine is the key to obtaining higher productivity and new fineness range (submicron) through dry grinding. Friable or crystalline materials are ground to an average particle size of 1 – 10 microns and graded in a very narrow particle size range. In the air mill, there are no moving parts that will wear or generate heat, and there are no screens that will be blocked or punctured. Due to the cooling effect of jet, there is no wear heat.
