The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Steam-powered Lithium Bromide Absorption Chiller competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global sales of Steam-powered Lithium Bromide Absorption Chillers reached 12,600 units in 2024, with an average selling price of \$238,000 per unit. A Steam-powered Lithium Bromide Absorption Chiller is a large-scale central air conditioning equipment that uses steam as the driving heat source and lithium bromide aqueous solution as the working pair. It employs the absorption-desorption cycle of the "water-lithium bromide" binary working pair to achieve refrigeration effect. The system utilizes 0.25-0.8MPa saturated steam as the driving energy source, through the generator to concentrate the dilute lithium bromide solution, and the water vapor is condensed in the condenser then throttled into the evaporator for heat absorption refrigeration. It comes in single-effect, double-effect, and direct-fired models. Its notable features include: utilizing industrial waste heat steam for energy cascade utilization, wide cooling capacity range (350-5800RT), COP up to 1.0-1.4 (double-effect type), and using water as refrigerant with both zero ODP and low GWP environmental advantages. It is mainly used in industrial plants, large commercial buildings, and district cooling systems for centralized refrigeration scenarios.

The global Steam-powered Lithium Bromide Absorption Chiller market size was estimated at USD 2999.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
