Abstracts

Steel degassing solutions are a type of process and equipment used in the metallurgical steelmaking process. Through vacuum degassing (VD, VOD, RH, and other processes), argon blowing, and supporting vacuum pumps, vacuum tanks, and control systems, they effectively remove hydrogen, oxygen, nitrogen, and other gaseous inclusions from molten steel, thereby improving the steel's purity, strength, and ductility. This solution is widely used in the production of high-end materials such as automotive steel, high-strength alloy steel, stainless steel, bearing steel, and electrical steel, and is particularly well-suited for engineering applications requiring high quality and reliability.
