### Report Overview

In steel industry terminology long steel products or long products refers to steel products including wire, rod, rail, and bars as well as types of steel structural sections and girders.

One trend in market is increase in use of steel scrap. The use of scraped steel and iron is increasing to reduce the environmental concerns regarding carbon dioxide emissions. Recycling of scrap improves the industry's economic viability and reduces the environmental impact by eliminating the need for iron ore extraction for steel production. This decreases carbon dioxide emissions significantly, saves energy and water consumption, and reduces air pollution. On an average, 1.79 metric tons of carbon dioxide is saved for each metric ton of scrap steel. Steel scrap has, therefore, become the choice of raw material for steel long product producers. Thus, concern for global warming caused by the steel industry is driving the use of steel scrap for the production of steel long products.
