## Abstracts

Steel mesh skeleton composite pipe is made of high-strength over plastic steel wire mesh skeleton and thermoplastic polyethylene as raw materials. Among them, steel wire wrapped mesh serves as the skeleton reinforcement of polyethylene plastic pipes, with high-density polyethylene (HDPE) as the matrix. High performance HDPE modified bonding resin is used to tightly connect the steel wire skeleton with the inner and outer high-density polyethylene layers, resulting in excellent composite effect. This type of pipe effectively solves the problem of interface between steel and PE, avoiding the problem of gaps at the interface between metal and plastic caused by temperature stress and internal pressure ring stress during storage and use.

The global Steel Mesh Skeleton Compound Pipe market size was estimated at USD 389.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
