Report Overview

The Tricone bits are primarily used for drilling into varied formations ranging from soft, medium to hard. They are especially well suited for hard rock formation. These bits are very reliable in a changing rock conditions. Tricone bits are ideally used for water bore drilling, geo thermal drilling and oil and gas exploration. Steel Milled Teeth Tricone Bits essentially consist of 3 roller cones. As the drill string is rotated the bit cones roll along the bottom of the bore hole in a circular motion. As they roll, new teeth come in contact with the bottom of the hole which helps to chip away the rock formation below and around the bit tooth. Typically air or drilling fluid is used to lift the crushed rock chips from the bottom of the hole up the annulus.
