### Report Overview

Pipe piles are a simple, easy to understand type of piling. A prebuilt steel pipe structure is driven into the ground, typically with large impact hammers. The piles remain in place primarily through friction with the soil. The pile designs will vary depending on the ground conditions and support expectations, enabling the pile systems to be adapted to any specific needs. Because they are made of steel, they can handle extremely heavy loads, and the right steels can make them virtually impervious to environmental conditions. Different options also allow clients to get the most effective materials for any pipe piles.
