## Abstracts

Steel Pressure-Sensitive Safety Mats is a safety protection device with pressure - sensing function mainly made of steel. It usually consists of a strong steel shell and precise internal pressure - sensing elements. Its working principle is that when an object applies pressure to the surface of the safety mat, the internal pressure - sensing elements will detect the pressure change and quickly transmit this signal to the connected control system. This device is widely used in many fields such as industrial production and automation equipment. For example, steel pressure - sensitive safety mats are laid around dangerous mechanical equipment like punching machines and injection molding machines. Once a person or an object steps into the area of the safety mat, it will immediately detect the pressure and trigger the corresponding safety mechanism to stop the equipment, thus preventing personnel from being injured and equipment from being damaged, and providing reliable safety guarantees for the production environment.

The global Steel Pressure Sensitive Safety Mats market size was estimated at USD 95.79 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
