## Abstracts

Steel stash windows, made primarily of steel, were commonly used before the popularity of aluminum sashes. However, their use in residential buildings has significantly declined due to drawbacks like heaviness, difficulty in operation, susceptibility to rust, and reduced airtightness. Despite these limitations, steel stash windows are valued for their fire resistance and are often used in commercial facilities and other buildings requiring fire doors. While not commonly used in residential settings due to functionality and maintenance concerns, steel stash windows are sometimes chosen for their smaller cross-sectional dimensions and the sense of stateliness they add to interior designs. Their primary applications are in commercial facilities, where their fire resistance and strength are crucial. Additionally, steel stash windows are frequently used in steel-framed and reinforced concrete buildings, particularly for fittings and fixtures.

The global Steel Stash Window market size was estimated at USD 3710.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
