Abstracts

Steel structures for bridges refer to load-bearing frameworks fabricated primarily from steel components, which provide the primary support system for bridge decks, facilitating the spanning of obstacles such as rivers, valleys, or roadways. These structures typically include girders, trusses, arches, or cable-stayed systems, designed to withstand dynamic loads, environmental stresses, and long-term wear while ensuring durability, flexibility in design, and efficient construction timelines. The use of high-strength steel allows for longer spans and reduced material weight compared to alternatives like concrete, making it a preferred choice for modern infrastructure projects requiring resilience, adaptability to complex geometries, and sustainability through potential recyclability.

The global Steel Structure For Bridge market size was estimated at USD 18750.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
