Abstracts

A steel stud partition system is a non - load - bearing partition system that uses steel studs as the framework and panels such as gypsum boards or fiber cement boards as the facing materials, assembled through specific connection methods. The steel studs, usually made of thin steel plates or strips by cold bending or stamping, have the characteristics of high strength, light weight, fire resistance, moisture resistance and easy installation, serving as the supporting structure of the partition. The facing materials are fixed to the steel studs to form a complete partition surface, which functions to separate spaces, provide sound insulation and heat insulation. Meanwhile, various supporting materials such as connectors, braces and sealing materials are also equipped to ensure the stability and integrity of the partition system. This system is widely used in various construction projects like office buildings, residences and hotels for the division of indoor spaces and functional areas.

The global Steel Stud Partition System market size was estimated at USD 6318.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
