## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Steep Pulse Ablation System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Steep Pulse Ablation System is a high-end minimally invasive therapeutic platform based on the principle of Irreversible Electroporation (IRE). By deploying multiple needle electrodes around the target tissue and delivering high-voltage steep-rising short pulses, the system creates permanent nanopores in cell membranes and induces apoptosis, enabling non-thermal, structure-preserving, and highly precise ablation. A complete system integrates a high-voltage pulse generator, pulse-modulation unit, multi-channel electrode interface, disposable or reusable electrode sets, imaging-guided navigation components, and workflow-oriented surgical software. Upstream inputs include high-voltage electronic modules, medical-grade alloy electrodes, insulation-coating consumables, surgical-grade metallic materials, and imaging localization/control software. Downstream users comprise oncology hospitals, interventional departments of general hospitals, cancer centers, ambulatory surgery centers, and research institutes, with applications in solid-tumor ablation, electrophysiology procedures, minimally invasive dermatology, and gene/cell research. In 2024, global production capacity is approximately 400 units, with around 223 units sold, an average price of USD 336,000 per system, and a gross margin of 40%?50%. Driven by the rapid advancement of non-thermal electric-field ablation technologies and rising demand for treating tumors in anatomically challenging regions, the market continues to expand steadily.

The global Steep Pulse Ablation System market size was estimated at USD 74.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40%

during the forecast period.
