Abstracts

Steer-by-wire (SBW) is a technology used in automobiles that replaces the traditional mechanical steering linkage (such as a steering column and shaft) with an electronic system. In a steer-by-wire system, the driver's inputs, usually applied through the steering wheel, are transmitted electronically to the vehicle's wheels without a direct mechanical connection. Instead, sensors and electronic control units interpret the driver's steering inputs and send signals to actuators or motors that control the direction of the wheels.

Increased Adoption in High-End Vehicles: Steer-by-wire technology was gaining traction in high-end and luxury vehicles where advanced technologies and innovative features are often showcased first. Luxury automakers were exploring SBW as a means to provide a more customizable and sophisticated driving experience.

Integration with Autonomous Driving Systems: Steer-by-wire systems were being considered as integral components in the development of autonomous driving capabilities. The technology facilitates easier integration with advanced driver assistance systems (ADAS) and autonomous driving features, contributing to the industry's move towards self-driving vehicles.

Research and Development Initiatives: Automotive manufacturers and technology companies were investing in research and development to enhance the reliability, safety, and performance of steer-by-wire systems. Efforts were directed towards overcoming technical challenges and improving the robustness of the technology.

Potential for Cost Reduction: Over time, as technology matures and becomes more commonplace, there was an expectation that economies of scale could contribute to cost reductions in the production of steer-by-wire systems. Cost considerations play a significant role in the broader adoption of innovative automotive technologies.

The global Steer By Wire market size was estimated at USD 3704.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.70% during the

forecast period.
