Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Steering Intermediate Shaft competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Steering Intermediate Shaft production reached approximately 88,450 k units, with an average global market price of around US\$ 16 per unit, a single-line production capacity of approximately 3.5 million units/year, and a gross profit margin of approximately 21%. Steering Intermediate Shaft is a mechanical component in a vehicle's steering system that transmits torque and steering input from the steering column to the steering gear (or rack and pinion). It serves as a flexible connection that compensates for misalignment, vibration, and movement between the steering wheel and the steering mechanism due to chassis deformation, suspension travel, or engine motion. The Steering Intermediate Shaft market is experiencing stable growth, primarily driven by increasing automobile production, advancements in steering technology, and the growing adoption of electric power steering (EPS) systems. This component plays a critical role in ensuring smooth torque transmission, vibration damping, and precise steering control between the steering wheel and the steering gear. Manufacturers are focusing on lightweight materials, overmolding techniques, and telescopic or collapsible designs to improve safety, comfort, and energy efficiency. Additionally, the trend toward electric and autonomous vehicles is accelerating innovation in steering intermediate shaft design, integrating advanced damping systems and flexible joints to meet high-performance and NVH (Noise, Vibration, and Harshness) requirements. The market is expected to maintain steady demand across passenger and commercial vehicle segments due to its essential role in steering performance and driver safety.

The global Steering Intermediate Shaft market size was estimated at USD 1415.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
