Abstracts

A steering system for a bus is a critical component responsible for translating driver inputs into controlled directional movement of the vehicle, comprising elements such as the steering wheel, column, gearbox or rack-and-pinion assembly, power steering pump (hydraulic or electric), tie rods, and linkages that work in unison to manage the turning of the front wheels, with modern systems increasingly incorporating electronic power steering (EPS) and advanced driver assistance features like lane-keeping assist for enhanced safety, stability, and maneuverability in heavy-duty applications. The global market is characterized by steady demand driven by public transportation expansion, urbanization trends, and regulatory emphasis on vehicle safety and emissions, with key players including established automotive suppliers such as ZF Friedrichshafen, Bosch, JTEKT, and Nexteer Automotive, while regional growth is particularly strong in Asia-Pacific due to infrastructure development and increasing bus fleet renewals in markets like China and India. Technological advancements are shifting the industry toward electrified steering solutions that reduce parasitic engine load and improve fuel efficiency, alongside integration with autonomous driving systems, though the market remains constrained by high development costs and the need for robust, durable components capable of withstanding the rigorous operating conditions of commercial buses.

The global Steering System For Bus market size was estimated at USD 2180.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
