## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Steering Wheel Heater System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Steering Wheel Heater System is an automotive comfort feature designed to warm the steering wheel rim, providing a more comfortable grip for the driver in cold weather. The system typically consists of embedded heating elements within the steering wheel, a temperature control module, and safety circuitry to prevent overheating. It enhances driver comfort and ergonomics without affecting vehicle safety. In 2024, global Steering Wheel Heater System production reached 9421 k units, with an average global market price of around US\$ 200 per unit. The upstream supply chain primarily includes raw material and component suppliers such as wire and copper foil manufacturers, flexible printed circuit (FPC) producers, temperature sensors, and electronic control module (ECM) suppliers. The downstream consists of automotive OEMs and Tier-1 interior system integrators who incorporate the heater system into the steering wheel assembly and sell fully assembled vehicles to end consumers. Some Tier-1 suppliers may also offer integration with other interior comfort systems, such as heated seats or steering column controls, to provide bundled solutions.

The global Steering Wheel Heater System market size was estimated at USD 2072.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
