Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Stem Compressive Strength Tester competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The stem compressive strength tester is a specialized device used to measure the ability of plant stems to withstand stress under compressive conditions. It is widely used in agricultural research and crop breeding. By applying gradually increasing pressure, the instrument accurately records the deformation and breakage points of the stem under different loads, helping to assess the crop's lodging resistance and mechanical strength. This helps guide breeding improvements and agricultural production management, ultimately improving crop stability and yield. Sales in 2024 were expected to reach 220,000 units, with an average price of US\$750 per unit. The single-line production capacity is 30,000 units, with a gross profit margin of 60%. Downstream consumption averages approximately five units per unit. The upstream supply chain for stem compressive strength testers primarily includes high-precision force sensors, mechanical components, data acquisition and control systems, and related software development. These core components rely on suppliers of precision manufacturing and electronics technology. Downstream suppliers include agricultural research institutions, crop breeding companies, university agricultural colleges, and agricultural machinery manufacturers. The equipment is used for crop lodging resistance assessment and seed selection, promoting the development of intelligent and precision agriculture, while also boosting the market growth for related laboratory instruments and agricultural technology services.

The global Stem Compressive Strength Tester market size was estimated at USD 165.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

8.50% during the forecast period.
