The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Stent-Type Thrombectomy Device competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Stent-Type Thrombectomy Device is a tubular medical device that is implanted into blood vessels through intervention. Its core is made of self-expanding materials such as nickel-titanium alloy. It has shape memory and high elasticity. It can automatically adhere to the wall after being released in the blood vessel. The blood clot blocking the blood vessel is embedded in the stent mesh structure through mechanical grasping or wrapping. It is then taken out of the body together with the stent as a whole to quickly restore blood flow. It has the advantages of less trauma, quick recovery, and high thrombus removal efficiency.

The global Stent-Type Thrombectomy Device market size was estimated at USD 395.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
