Report Overview:

Stereolithography (SLA) was the first 3D printing technology. An SLA printer makes use of mirrors, with one positioned on the X-axis and another on the Y-axis. These mirrors rapidly aim a laser beam across the vat of resin, curing and solidifying a cross-section of the object inside this build area, building it up layer by layer. Stereolithography (SLA) 3D printing has become vastly popular for its ability to produce high-accuracy, isotropic, and watertight prototypes and parts in a range of advanced materials with fine features and smooth surface finish.

The Global Stereolithography 3D Printer Market Size was estimated at USD 459.94 million in 2023 and is projected to reach USD 733.94 million by 2029, exhibiting a CAGR of 8.10% during the forecast period.
