## Abstracts

X-rays are basically a form of electromagnetic radiation that is similar to visible light. Medical x-rays are used to generate images of tissues and structures inside the body. If x-rays travelling through the body also pass through an x-ray detector on the other side of the patient, an image will be formed that represents the 'shadows' formed by the objects inside the body. The stereotactic x-ray basically allow for precise placement of probes inside the brain or other sections of the body.
