Abstracts

Sterile centrifugal pumps are specialized fluid handling devices designed to maintain aseptic conditions by preventing contamination during the transfer of sensitive liquids, featuring components such as polished surfaces, clean-in-place (CIP) and steam-in-place (SIP) capabilities, and seals or materials compliant with regulatory standards like FDA and EHEDG. These pumps are engineered to handle pharmaceuticals, bioprocessing fluids, food and beverage ingredients, and other sterile applications where microbial integrity, product purity, and cross-contamination avoidance are critical, utilizing centrifugal force to move fluids without positive displacement while ensuring all wetted parts are sterilizable and constructed from non-reactive materials such as 316L stainless steel or advanced polymers.
