Abstracts

A sterile transfer cabinet is a self-contained, enclosed workspace designed to provide a controlled environment for handling materials or processes that require protection from contamination, typically utilizing HEPA or ULPA filtration to maintain an ISO Class 5 or cleaner air quality within the work zone; unlike biological safety cabinets, these units do not provide operator or environmental protection but focus exclusively on safeguarding products, samples, or processes from particulate and microbial contamination during transfer, assembly, or manipulation, making them essential in industries such as pharmaceuticals, biotechnology, medical device manufacturing, and microbiology laboratories where aseptic conditions are critical.
