Abstracts

A sterndrive propeller is a propulsion device installed at the stern of a vessel, providing propulsion through a combined unit that combines an engine and a transmission system. It is usually used in conjunction with an inboard engine, with the engine power transmitted to the propeller through a drive shaft. Unlike traditional inboard propulsion systems, the biggest feature of a sterndrive propeller is its adjustability, which allows the entire propeller unit to rotate underwater, thereby changing the direction of thrust and providing better controllability and maneuverability.

The global Sterndrive Propeller market size was estimated at USD 3643.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
