Abstracts

Stick welding electrodes, also known as shielded metal arc welding (SMAW) electrodes, are consumable rods composed of a metal core wire coated with a flux material that provides shielding gas and slag to protect the molten weld pool from atmospheric contamination, stabilize the arc, and often add alloying elements to the weld metal. These electrodes are widely used across industries such as construction, shipbuilding, pipeline fabrication, heavy equipment manufacturing, and field repair due to their portability, versatility in outdoor or windy conditions, and ability to weld a variety of metals and thicknesses with relatively simple equipment. The market is characterized by demand for different electrode types?such as mild steel, low-hydrogen, stainless steel, and cast iron varieties?each tailored to specific mechanical properties, positions, and applications, with global consumption driven by infrastructure development, industrial maintenance, and growth in energy and construction sectors.

The global Stick Welding Electrode market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
