Abstracts

A stone chip is a small piece of rock or gravel that is kicked up by a vehicle's tires and strikes the surface of the vehicle, causing a small chip or dent. Stone chips are a common occurrence and can happen while driving on gravel roads or when following other vehicles on paved roads. They can cause cosmetic damage to the vehicle's paintwork and, in some cases, may lead to more serious issues such as rust or corrosion if left untreated. Stone chip damage can be repaired through various methods, such as touch-up paint or professional paintwork.
