Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Stone Edging Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Stone Edging Machine is a mechanical device specially used for grinding the edges of stones. It is mainly composed of grinding head, motor, conveyor belt and other parts. It can grind the edge of stone smooth and flat, so that it has better decorative effect and performance. Stone Edging Machine is suitable for processing various marble, granite and quartz. In 2024, global Stone Edging Machine production reached approximately 128 K units, with an average global market price of around US\$ 3,200 per unit. The single-line production capacity of Stone Edging Machine is 6,700-6,900 units per year, the average gross profit margin was 26-29%. The upstream of the stone edging machine supply chain covers suppliers of core raw materials and key components, including providers of metal materials like steel for the machine frame, specialized materials such as diamond for grinding wheels and resin abrasives, and suppliers of precision parts like servo motors, numerical control systems, and high-precision guide rails. The midstream consists of manufacturers that integrate these inputs through processes like welding, assembly, and system debugging to produce manual, semi-automatic, and fully automatic stone edging machines of various specifications, while also conducting quality testing and optimizing functions such as dust removal and energy conservation to meet industry standards. The downstream connects to distributors and agents that deliver the equipment to terminal users, mainly including stone processing factories, building decoration enterprises, and manufacturers of stone furniture and custom decorative parts, and it is also applied in infrastructure construction projects that involve a large number of stone edge processing tasks. The cost structure of stone edging machines is dominated by key component costs,

accounting for about 35%-45% of the total cost?precision parts like imported or high-end domestic numerical control systems and servo motors are the main cost drivers, while wear - and - tear parts such as diamond grinding wheels also add to this part of the expense. Raw material costs make up 20%-25%, mainly including the cost of steel for the machine body and materials for auxiliary structures, whose prices fluctuate with changes in the commodity market. Manufacturing and processing costs account for 15%-20%, covering expenses for welding, assembly, debugging, and the integration of environmental protection and energy - saving modules like dust collection and frequency conversion speed regulation. The remaining 10%-15% includes overheads such as R & D investment for intelligent function upgrades, equipment depreciation, after - sales service reserves, and packaging and transportation fees, with R & D costs being higher for fully automatic intelligent models to support technologies like AI visual recognition and IoT remote monitoring.

The global Stone Edging Machine market size was estimated at USD 410.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
