Report Overview:

The vinyl ester family is one of the prominent polymers in the adhesive industry. The number of vinyl derivatives is very large and is produced either as an emulsion or as a solvent soluble type. Polyvinyl acetate (PVA) is the most preferred vinyl ester in the manufacturing of stone and tile adhesives. These adhesives are often mixed with Others substrates to enhance the bond strength at different temperature ranges also. For instance, PVA adhesives are used in combination with melamine-based adhesives, in order to improve the working of adhesive in presence of water and at high-temperature conditions. Others processes, such as copolymerizing vinyl acetate with more hydrophobic monomers or functional monomers and blending PVA with additives and hardeners, are also done to achieve more efficient adhesion characteristics. Primers play a significant role in preparing surfaces, prior to the application of tile adhesive. PVA primers help to reduce the porosity of high absorbent substrates, which prevents the rapid suction of water out of the tile adhesive when applied.

The Global Stone and Tile Adhesives Market Size was estimated at USD 600.33 million in 2023 and is projected to reach USD 721.01 million by 2029, exhibiting a CAGR of 3.10% during the forecast period.
